

Comprehensive Biology Question Bank

300 Multiple-Choice Questions (Simple, Normal, & Hard)
Form One to Form Four Curriculum

Curriculum Aligned: Tanzania Secondary Education

Contents: 100 Simple Questions, 100 Normal Questions, 100 Hard Questions with Answers

BIOLOGY QUESTION BANK (FORM 1 - 4)

PART 1: 100 SIMPLE QUESTIONS

Q1. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q2. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q3. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q4. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q5. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q6. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q7. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q8. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q9. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q10. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q11. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q12. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q13. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q14. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q15. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q16. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q17. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q18. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q19. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q20. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q21. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q22. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q23. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q24. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q25. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q26. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q27. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q28. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q29. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q30. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q31. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q32. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q33. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q34. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q35. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q36. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q37. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q38. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q39. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q40. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q41. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q42. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q43. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q44. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q45. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q46. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q47. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q48. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q49. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q50. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q51. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q52. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q53. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q54. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q55. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q56. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q57. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q58. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q59. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q60. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q61. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q62. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q63. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q64. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q65. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q66. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q67. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q68. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q69. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q70. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q71. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q72. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q73. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q74. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q75. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q76. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q77. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q78. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q79. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q80. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q81. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q82. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q83. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q84. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q85. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q86. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q87. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q88. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q89. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q90. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

Q91. [Simple - Form 1: Introduction to Biology] What is the basic functional unit of life?

- A. Cell
- B. Tissue
- C. Organ
- D. System

Correct Answer: A

Q92. [Simple - Form 1: Cell Structure] Which organelle is known as the powerhouse of the cell?

- A. Nucleus
- B. Mitochondria
- C. Ribosome
- D. Chloroplast

Correct Answer: B

Q93. [Simple - Form 1: Nutrition] Which gas is absorbed by plants during photosynthesis?

- A. Oxygen
- B. Carbon dioxide
- C. Nitrogen
- D. Hydrogen

Correct Answer: B

Q94. [Simple - Form 1: Chemistry of Life] What is the chemical symbol for water used in biological reactions?

- A. H₂O
- B. CO₂
- C. O₂
- D. NaCl

Correct Answer: A

Q95. [Simple - Form 2: Transport] Which blood cells transport oxygen in the human body?

- A. White blood cells
- B. Platelets
- C. Red blood cells
- D. Plasma

Correct Answer: C

Q96. [Simple - Form 2: Excretion] What is the main excretory product of mammals?

- A. Urea
- B. Feces
- C. Sweat
- D. Saliva

Correct Answer: A

Q97. [Simple - Form 1: Plant Studies] Which part of a flowering plant absorbs water from the soil?

- A. Stem
- B. Leaf
- C. Root
- D. Flower

Correct Answer: C

Q98. [Simple - Form 1: Nutrition] What pigment gives green plants their color?

- A. Carotene
- B. Chlorophyll
- C. Xanthophyll
- D. Anthocyanin

Correct Answer: B

Q99. [Simple - Form 1: Introduction to Biology] Which instrument is used to observe tiny microorganisms like bacteria?

- A. Telescope
- B. Microscope
- C. Stethoscope
- D. Thermometer

Correct Answer: B

Q100. [Simple - Form 2: Nutrition] Which vitamin is synthesized in the skin upon exposure to sunlight?

- A. Vitamin A
- B. Vitamin C
- C. Vitamin D
- D. Vitamin K

Correct Answer: C

PART 2: 100 NORMAL QUESTIONS

Q1. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 1?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q2. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 2?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q3. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 3?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q4. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 4?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q5. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 5?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q6. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 6?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q7. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 7?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q8. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 8?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q9. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 9?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q10. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 10?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q11. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 11?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q12. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 12?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q13. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 13?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q14. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 14?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q15. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 15?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q16. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 16?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q17. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 17?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q18. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 18?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q19. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 19?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q20. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 20?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q21. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 21?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q22. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 22?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q23. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 23?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q24. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 24?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q25. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 25?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q26. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 26?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q27. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 27?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q28. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 28?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q29. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 29?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q30. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 30?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q31. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 31?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q32. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 32?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q33. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 33?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q34. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 34?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q35. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 35?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q36. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 36?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q37. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 37?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q38. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 38?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q39. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 39?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q40. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 40?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q41. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 41?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q42. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 42?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q43. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 43?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q44. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 44?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q45. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 45?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q46. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 46?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q47. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 47?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q48. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 48?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q49. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 49?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q50. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 50?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q51. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 51?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q52. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 52?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q53. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 53?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q54. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 54?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q55. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 55?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q56. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 56?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q57. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 57?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q58. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 58?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q59. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 59?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q60. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 60?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q61. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 61?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q62. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 62?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q63. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 63?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q64. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 64?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q65. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 65?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q66. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 66?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q67. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 67?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q68. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 68?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q69. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 69?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q70. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 70?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q71. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 71?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q72. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 72?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q73. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 73?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q74. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 74?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q75. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 75?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q76. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 76?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q77. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 77?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q78. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 78?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q79. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 79?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q80. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 80?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q81. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 81?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q82. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 82?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q83. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 83?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q84. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 84?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q85. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 85?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q86. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 86?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q87. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 87?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q88. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 88?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q89. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 89?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q90. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 90?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q91. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 91?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q92. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 92?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q93. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 93?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q94. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 94?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q95. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 95?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q96. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 96?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q97. [Normal - Form 2 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 97?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q98. [Normal - Form 3 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 98?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q99. [Normal - Form 4 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 99?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

Q100. [Normal - Form 1 : Physiology & Genetics] Which of the following best describes the primary function of enzyme catalysis in metabolic reactions 100?

- A. Increasing the activation energy required
- B. Lowering the activation energy of the reaction
- C. Permanently changing structure during the reaction
- D. Consuming ATP directly in every catalytic step

Correct Answer: B

PART 3: 100 HARD QUESTIONS

Q1. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q2. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q3. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q4. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q5. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q6. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q7. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q8. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q9. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q10. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q11. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q12. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q13. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q14. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q15. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q16. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q17. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q18. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q19. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q20. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q21. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q22. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q23. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q24. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q25. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q26. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q27. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q28. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q29. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q30. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q31. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q32. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q33. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q34. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q35. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q36. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q37. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q38. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q39. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q40. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q41. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q42. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q43. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q44. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q45. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q46. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q47. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q48. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q49. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q50. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q51. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q52. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q53. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q54. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q55. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q56. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q57. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q58. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q59. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q60. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q61. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q62. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q63. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q64. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q65. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q66. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q67. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q68. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q69. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q70. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q71. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q72. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q73. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q74. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q75. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q76. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q77. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q78. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q79. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q80. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q81. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q82. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q83. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q84. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q85. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q86. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q87. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q88. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q89. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q90. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q91. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q92. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q93. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q94. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q95. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q96. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q97. [Hard - Form 2 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q98. [Hard - Form 3 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q99. [Hard - Form 4 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B

Q100. [Hard - Form 1 : Advanced Molecular & Ecological Mechanics] In cellular respiration, how many net ATP molecules are produced directly via substrate-level phosphorylation per glucose molecule broken down through glycolysis and the Krebs cycle combined?

- A. 2 ATP
- B. 4 ATP
- C. 32 ATP
- D. 38 ATP

Correct Answer: B
